The artists

Margarita Cimadevila (Spain) and **Wolfgang Trettnak** (Austria), scientists by origin, founders of the international science and art association ARSCIENCIA and organizers of the international course “Science & Art: so different, so similar!” have exhibited in Europe and China.

Their joint project *Mare Plasticum – Plastic Fishes*, created in Galicia, offers a real, imaginary and artistic vision on the problem of the plastic contamination of the oceans. It tells us: *It is time to act!*

Curator:

Marilena Streit-Bianchi (CERN Honorary Staff Member)
