

BIOGRAPHY

The painter MARGARITA CIMADEVILA, born in Sada, A Coruña, Spain, is graduated in Chemistry and worked as a teacher of Physics and Chemistry and as a director in different Secondary Schools in Galicia.

The objectives of her exhibitions are:

- Spreading, disseminating the world of Science.
- Artistic, showing the relationship between Science and Art.
- Didactic, creating useful graphic material for teaching.

She is the president of the organization ARSCIENCIA, an international non-profit organization, whose principal aims are to promote activities about Science & Art and to show the relationships between both of them.

Her artistic work has been shown in many universities, museums and other institutions in Europe, America and China.

Front page:

“WOMEN OF CORUÑA”, mixed technique on canvas, 1 x 1m

This painting was made for the *International Women's Day, 8th March 2009*, for the city of A Coruña, Spain.

In the center can be seen the women's symbol and inside it "Hercules Tower" the oldest working light house in the world, which is the symbol of the city. It lights up the different traditional professions of women of A Coruña.

Organized by:

ART & SCIENCE & EQUALITY

NUCLEAR FISSION

LISE MEITNER
Physicist, Austria (1878-1968)

CERN

As a result of the participation of Cimadevila in the *High School Teachers (HST 2003)* of the *European Laboratory of Nuclear Research, CERN*, in Geneva, her pictorial work underwent a radical change and she focused on mixing her two worlds: Science & Art.

In 2004 she showed in the *CERN* her first exhibition of paintings about Science & Art: *"Particle physics I"*. Her sources of inspiration were the lectures of the *HST* and the visits to the installations at *CERN*. Since then all of her exhibitions have been about Science & Art.

Her work has been shown in events related with *CERN* and particle physics, such as *"Int. Particle Accelerator Conference 2011"*, and she organized programs to spread the *CERN* world to students and teachers.

Her last collaboration with *CERN* was in May 2016. She participated in an exhibition of *"art@CMS"* in Naples, where thirty artworks by international artists showed the discovery of the Higgs boson.

STARS, SPECTRAL TYPES

ANNIE CANNON
Astronomer, USA (1863-1941)

EQUALITY

To make visible the role of women in Science and to fight for gender equality in Science and Life are the objectives of Cimadevila's exhibitions:

CIENCIA EX AEQUO pays a tribute to women who, having done a wonderful job and deserving to be acknowledged for their work in Science, were ignored, forgotten or relegated to a less important status in favor of other people. The paintings are about their scientific work and include information on their achievements and life.

AVANT-GARDE IN SCIENCE is about women and men who were in the Avant-Garde of Science and Life, working together in equality at the beginning of the 20th century.

She has participated in many equality-related activities with various institutions: *Innovation Convention 2014* (European Commission, Brussels), *Women in Technology and Science (WITS)*, *Office for Gender Equality* (University A Coruña), *Gender Studies Centre* (University Bratislava), *Int. Conf. on Women in Physics* (University Waterloo, Canada)...

Mixed technique on canvas, 1 x 1 m
DNA, PHOTOGRAPH 51

ROSALIND FRANKLIN
Biochemist, UK (1920-1958)

ECO-ART

Since 2014 Cimadevila is working in the exhibition *MARE PLASTICUM* dealing with the pollution of the oceans by plastic and its environmental consequences: entanglement, plastic ingestion, mortality of species, toxicity ...

Its objective is to make known these and other problems to the public and to sensitize it. It offers a vision that is both real and imaginary and is sounding the alarm:

"It is time to act!"

The art works (paintings/assemblages) are made of plastic litter, which was collected on Galician beaches by the authors Margarita Cimadevila and Wolfgang Trettnak. Scientific information, comics, posters, mobiles and videos complete the exhibition.

It was awarded the 1st prize in Sustainability in *"Ciencia en Acción 2015"* in Spain and has been shown at the *Oceanographic Museum of Monaco*, *MUNCYT A Coruña*, *CONAMA 2016 (National Congress on the Environment, Spain)*, *CERN* ...
